

MATERIAL HANDLER

Track-Guided 3-Axis Material Handler Lift - Stock Picker

With 30 years experience, LPI is the recognized industry leader in manufacturing lifts. Challenge us with your application.

Material Handler-Track Guided 3-Axis

For dedicated stock picking applications LPI has designed and manufactured a 3-Axis material picking system. Powered by an electric / hydraulic power unit, the lift moves horizontally along a track system that provides both tracking and support. The operator control console is positioned alongside the vertical mast so the operator has a clear view of the lift forks as they are positioned for lifting. From the console, the operator can raise the forks vertically and extend them out horizontally to place or retrieve loads and material on shelving and racks. The 1000# standard capacity is ideal for most applications, and if not, custom systems with increased capacity are available.

Challenge us with your application!

View our website - www.lpi-inc.com for more information on the Work-Catch Platforms or any of our other products. Our engineers will work closely with you to develop a system designed specifically to your application.
